

App Innovate

Aging systems and legacy applications cannot meet today's business goals and customer expectations. Tallan offers App Innovate to help customers prepare to migrate and modernize their applications to the cloud through a consultative engagement. In this engagement, Tallan will analyze up to 5 applications and provide recommendations, a reference architecture design, and a modernization plan.

During the Engagement

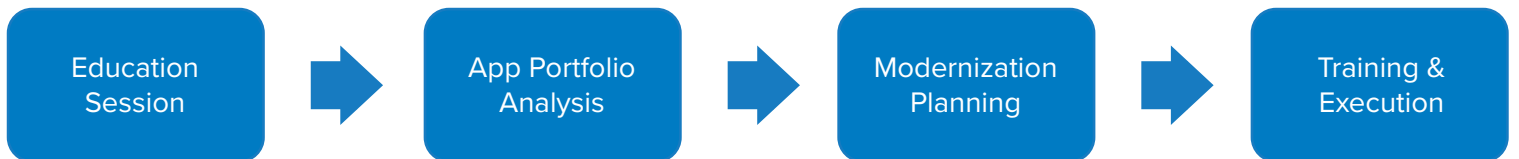

App Portfolio Analysis

Tallan will evaluate applications from a people, process and technology perspective to ensure that our recommendations meet the needs of your users and the skills of your team.

Modernization Planning

We will present options for modernizing the applications. The preferred option will be architected and planned to provide you with actionable next steps.

Experience Talent-Driven Innovation

Founded in 1985, Tallan provides technology and business process consulting services to enterprise and mid-sized companies, as well as government entities, with a focus on Custom Development, Portals and Collaboration, Business Intelligence, Application Integration, Mobile Platforms, User Experience, Ecommerce, Web Development, and Cloud Services.
